30-day Readmission Rate: The risk-adjusted percentage of consumers with a readmission to the same level of care at any facility within 30 days of discharge from the reported facility. This measure was adapted from a similar measure that CMS employs for readmissions and applies to all levels of care.

7-day Follow-Up Post Hospitalization: The percentage of discharges from acute inpatient and residential behavioral healthcare for consumers who kept a follow-up session with a licensed mental health practitioner for an outpatient visit, intensive outpatient encounter, or partial hospitalization within 7 days of discharge.

Step up rate: The percentage of patients stepping up to a higher level of care following a discharge from an acute stay with a step down to residential, partial hospitalization or structured outpatient. The step up must occur within 30 days of the acute discharge date. All cases have to originate with an acute admission. This step up rate applies only to lower levels of care that are within the same hospital system as the acute admission.

Residual Length of Stay: The difference between the facility's raw average length of stay and the case-mix adjusted average length of stay. The casemix adjusted ALOS considers variables including but not limited to the consumer's age, product type (Medicare, Medicaid, or Commercial), and primary diagnosis.

BH Spend per Inpatient Episode: Measured at the consumer level and includes the behavioral health claims from 3 days prior to admission through 30 days post discharge. Behavioral health claims from the non-admitting facility are included in the episode spend. Case-mix adjustment is applied to account for patient characteristics. This measure was adapted from a similar measure that CMS employs for medical spending.

Portal Usage: The percentage of initial reviews that are completed via Review Online.

Pre-Cert Notification: The percentage of cases where Optum was notified of the admission within 24 hours.

Peer Review Rate: The percentage of cases across all levels of care where one or more peer reviews occurred during the admission.
